

Aim:

Write a program which finds the kth smallest number among the given one dimensional array.

Sample Input and Output:

```
Enter how many values you want to read : 5
Enter the value of a[0] : 20
Enter the value of a[1] : 30
Enter the value of a[2] : 16
Enter the value of a[3] : 15
Enter the value of a[4] : 1
Enter which smallest element you want: 2
16 is the 2th smallest element
```

Hint: The kth element refers to the index.

Source Code:

smallest.c

```
#include<stdio.h>
int main()
{
    int a[20];
    int i,j,n,temp,kth;
    printf("Enter how many values you want to read : ");
    scanf("%d",&n);
    for(i=0;i<n;i++)
    {
        printf("Enter the value of a[%d] : ",i);
        scanf("%d",&a[i]);
    }
    printf("Enter which smallest element you want: ");
    scanf("%d",&kth);
    for(i=0;i<n-1;i++)
    {
        for(j=i+1;j<n;j++)
        {
            if(a[j]<a[i])
            {
                temp=a[i];
                a[i]=a[j];
                a[j]=temp;
            }
        }
    }
    printf("%d is the %dth smallest element\n",a[kth],kth);
    return 0;
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter how many values you want to read : 5
Enter the value of a[0] : 20
Enter the value of a[1] : 30
Enter the value of a[2] : 16
Enter the value of a[3] : 15
Enter the value of a[4] : 1
Enter which smallest element you want: 2
16 is the 2th smallest element

Test Case - 2
User Output
Enter how many values you want to read : 6
Enter the value of a[0] : 32
Enter the value of a[1] : 65
Enter the value of a[2] : 98
Enter the value of a[3] : 74
Enter the value of a[4] : 12
Enter the value of a[5] : 15
Enter which smallest element you want: 4
74 is the 4th smallest element
